1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 2, 7 10 and 11 are rejected under 35 U.S.C. 102(a) & (b) as being clearly anticipated by Zhenya Zhu et al. article titled "Experimental studies of electrokinetic conversions in fluid-saturated borehole models".

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claims 3-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over by Zhenya Zhu et al. as applied to claim 1 above, and further in view of Tang et al. (5841280).

Zhu et al. lack a teaching of the specifics of the claimed type of acoustic and seismoelectric measurements to derive surrounding formation properties, which Tang et al. teach for the same purposes of downhole substrata properties and thus it would have been obvious to one of ordinary skill in the art to combine the teachings since they are concerned with alternatives of the same electromagnetic substrata properties.

6. Claims 8 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over by Zhenya Zhu et al. as applied to claim 1 above, and further in view of the document WO 03/073134 A1.

The WO 03/073134 A1 document teaches the alternative seismomagnetic and/or magnetoseismic signal processing lacking in Zhu et al., and since they are both concerned with determining substrata properties for similar purposes it would have been obvious to one of ordinary skill in the art to combine their teachings to derive such substrata properties.

7. Claims 12-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over by Zhenya Zhu et al. as applied to claim 1 above, and further in view of Strack (US 20030038634).

Zhu et al. lacks showing and specifics of the apparatus system for supplying data for its data processing algorithms. Strack teach a typical prior art logging tool that would be available to supply the types of signals for processing by Zhu et al. Since such

Art Unit: 2857

alternative logging tools for supplying such signals were well known, to select and use such alternatives would have been obvious to one of ordinary skill in the art for various reasons such as cost or availability of equipment for the same purposes, and thus not involve the concept of invention.
